Whether you are an engineer, technician, or project manager working in the energy sector, understanding this system is essential for optimizing plant operations and ensuring safety and reliability.

What is the Siemens KKS Identification System?

The Siemens KKS (Kraftwerk-Kennzeichnungs-System) is a coding standard that assigns unique identifiers to the various components within power plants and electrical systems. It is based on a structured alphanumeric code that reflects the type, location, and function of each piece of equipment or subsystem.

Originally developed in Germany, the KKS system has been adopted internationally, especially by Siemens and other major industrial players, due to its clarity and scalability. It allows for:

- Consistent Identification: Each element in the plant has a unique code, avoiding confusion.
- Simplified Maintenance: Easier tracking and referencing of components.
- Efficient Communication: Clear documentation and communication across teams.
- Streamlined Design and Documentation: Facilitates automation and digitalization efforts.

Structural Components of the KKS Code

The KKS code is organized into hierarchical segments, each providing specific information about the component. Typically, a complete KKS code comprises three main parts:

- System Code (Letter(s)): Denotes the general system or functional area.
- Subsystem Code (Number(s)): Specifies the subsystem within the main system.
- Element Code (Number(s)): Identifies the individual component or device.

Some cases might include additional subdivisions for more detailed identification.

Example of a Typical KKS Code

...

ABB 01 23

...

- ABB: System code (e.g., Auxiliary Power System)
- 01: Subsystem code (e.g., Power Supply)
- 23: Element code (e.g., Transformer)

Hierarchical Breakdown:

| Part | Description | Example |

|-----|-----|-----|

| System Code | Main functional area of the plant | ABB, BMS |

| Subsystem Code | Specific subsystem within the system | 01, 02, 03|

| Element Code | Unique identifier for individual components | 23, 45, 67|

Additional Codes

In complex systems, further subdivisions may include:

- Location identifiers (e.g., plant section, floor)
