- AWS Lambda: Serverless compute service that runs code in response to events. Ideal for microservices, event-driven architectures.
- Amazon ECS/EKS: Container orchestration services for deploying and managing containerized applications.

Storage Services

- Amazon S3: Scalable object storage ideal for static websites, backups, and data lakes.
- Amazon EBS: Block storage for EC2 instances, suitable for databases and applications requiring low latency.
- Amazon EFS: Managed file storage that can be shared across multiple EC2 instances.

Database Services

- Amazon RDS: Managed relational database service supporting MySQL, PostgreSQL, SQL Server, etc.
- DynamoDB: NoSQL key-value and document database for high-performance applications.
- Amazon Aurora: High-performance, highly available relational database compatible with MySQL and PostgreSQL.

Networking & Content Delivery

- VPC: Isolated network environment.
- Route 53: Domain Name System (DNS) service for routing end-user requests.
- Elastic Load Balancer (ELB): Distributes incoming traffic across multiple targets.

Security & Identity

- IAM: Manage user permissions and roles.
- KMS (Key Management Service): Manage encryption keys.
