Common stains include Giemsa, H&E (Hematoxylin and Eosin), and iodine solution, which help highlight different cellular components for better visualization. Describe the life cycle of Plasmodium in brief. Plasmodium has a complex life cycle involving mosquitoes (Anopheles) as vectors and humans as hosts, with stages including sporozoites, merozoites, gametocytes, and the formation of oocysts in the mosquito gut. What is the purpose of using a cover slip in slide preparation? A cover slip protects the specimen, provides a flat surface for viewing, and prevents the sample from drying out or moving during observation. How can you differentiate between male and female Ascaris worms? Male Ascaris worms are shorter and have a curved tail, whereas females are longer, straight, and have a prominent reproductive opening at the posterior end. What are the key features to observe in a prepared earthworm slide? Key features include the segmented body (metameres), setae (bristles), the dorsal blood vessel, and the reproductive organs such as testes and ovaries. Why is it important to handle slides and specimens carefully during practical zoology experiments?
