Understanding the Water Cycle

The water cycle, also known as the hydrological cycle, describes the continuous movement of water on, above, and below the Earth's surface. This cycle involves various processes that work together to circulate water, ensuring the availability of fresh water for all living organisms.

Key Processes of the Water Cycle

The main stages of the water cycle include:

- **Evaporation:** The process where water from oceans, lakes, and other bodies turns into vapor due to the Sun's heat.
- **Transpiration:** The release of water vapor from plants through their leaves.
- **Condensation:** Water vapor cools and forms clouds or fog.
- **Precipitation:** Water droplets in clouds combine and fall to the Earth as rain, snow, sleet, or hail.
- **Collection:** Precipitated water gathers in bodies of water like rivers, lakes, and oceans.
- **Infiltration:** Some water seeps into the ground, replenishing underground aquifers.

Understanding these processes is crucial when creating a word search focused on the water cycle, as they form the basis of the vocabulary used within the puzzle.
