Understanding Obstetrics and Gynaecology: An Overview

Obstetrics and gynaecology (OB-GYN) are interconnected branches of medicine dedicated to women's reproductive health. Obstetrics focuses on pregnancy, childbirth, and postpartum care, while gynaecology deals with the health of the female reproductive system outside pregnancy. Mastery of these fields requires familiarity with anatomy, physiology, common conditions, diagnostic tools, and management strategies.

Key Anatomical and Physiological Concepts

Understanding the anatomy and physiology of the female reproductive system forms the foundation of obstetrics and gynaecology.

Reproductive Anatomy

- **Uterus:** Pear-shaped muscular organ, divided into fundus, body, isthmus, and cervix.
- **Ovaries:** Paired organs producing ova and hormones like estrogen and progesterone.
- **Fallopian Tubes:** Convey ova from ovaries to uterus; site of fertilization.
- **Vagina:** Muscular canal connecting external genitalia to cervix.
- **External genitalia (Vulva):** Includes labia majora, labia minora, clitoris, and vestibule.

Physiological Principles

- **Menstrual Cycle:** Typically 28 days, involving phases of menstruation, follicular development, ovulation, luteal phase, and menstruation.

- **Hormonal Regulation:** Hypothalamic-pituitary-ovarian axis controls cycle via GnRH, FSH, LH, estrogen, and progesterone.
- **Pregnancy Physiology:** Adaptations include increased blood volume, cardiac output, and hormonal changes to support fetal development.

Essential Obstetric Topics

A quick reference to the most critical aspects of obstetrics helps manage pregnant patients efficiently.

Pregnancy Assessment and Monitoring

- **Preterm Labour:** Labour before 37 weeks; managed with corticosteroids, tocolytics.
- **Placenta Previa:** Placenta covering the cervical os; causes painless bleeding.
- **Placental Abruption:** Premature separation of placenta; causes painful bleeding and fetal distress.

Labor and Delivery Management

- **Stages of Labor:** First (cervical dilation), second (delivery of fetus), third (delivery of placenta).
- **Fetal Heart Rate Monitoring:** Detects fetal distress; normal range 110-160 bpm.
- **Delivery Methods:** Vaginal delivery, cesarean section (indications include fetal distress, placental issues).
- **Postpartum Care:** Monitoring for hemorrhage, infection, breastfeeding support.

Key Gynaecological Topics

Gynaecology covers a wide spectrum of conditions affecting women's reproductive organs.

Menstrual Disorders

- **Amenorrhea:** Absence of menstruation; primary (no onset by age 15) or secondary (cessation after previously normal cycles).
- **Menorrhagia:** Excessive bleeding (>80 mL per cycle).
- **Dysmenorrhea:** Painful menstruation; primary (functional) or secondary (due to pathology).

Infections and Inflammatory Conditions
